How do I set the WSO100 wind damping period using Maretron's DSM250 display?

35 Mark Oslund July 13, 2015 DSM250 (Discontinued), DSM410, WSO100 (Discontinued) 0 7.80K

You set the WSO100 wind damping period using Maretron's DSM150 or DSM250 display in the following way:

1. Enter menu mode, scroll to "Configuration…" and press
2. Scroll to "Device Configuration…" and press
3. Scroll to the row containing the WSO100 and press
4. Scroll to "Wind Data Damping Period:" and press
5. Set the damping period lower to see very quick changes in wind speed and direction or set the period higher to smooth out wind readings. The damping period is actually a moving average filter so you must be careful not to set the period to high because this introduces latency or delay in the reported wind speed and direction.
